50 % Discount on our algos if you register as new user to IG with this link:

<https://iggroup.sjv.io/c/6061811/1367837/15576>

Size, indice and margin: <https://profitalgos.com/webshop/>

Prerequisites

- IG account with ProRealTime enabled (free when you actively trade).
- Your .itf files: PaKey.itf (license), Strategy, and Indicator.
- Stable internet connection.
- Time zone: set ProRealTime to Europe/Stockholm (CET/CEST) so daylight saving is automatic.

ProRealTime

ProRealTime är ett frestade diagrampaket som ger dig tillgång till mer än 100 tekniska indikatorer samt möjlighet att skapa anpassade indikatorer. Du får kontrastrikt tillgång till diagram i ProRealTime om du gör minst fyra transaktioner under innevarande kalendermånad. Om du inte uppfyller detta krav – eller om värdet på dina transaktioner är extremt lågt – kommer vi att dra 330 SEK i månadsavgift från ditt konto sista dagen varje kalendermånad.

Välkommen till **ProRealTime** innan du aktiverar ProRealTime

Du kan välja att **inaktivera ProRealTime** när som helst – och aktivera tjänsten igen senare om du så önskar – med hjälp av alternativet på denna sida.

Aktivera ProRealTime för aktiva konton

ProOrder

Aktivering av ProOrder ger dig möjlighet att skapa trading-strategier som automatiskt exekveras i ProRealTime enligt de parametrar du anger. Observera att användningen av ProOrder för att skapa trading-strategier innebär att positioner öppnas och stängs utan din manuella inblandning.

Are you having trouble starting ProRealTime? Click here to easily solve the issue

Quick Start (5–8 minutes)

1) Remove any old PA versions

If you ran earlier ProfitAlgos versions, delete them in PRT so you don't mix versions.

2) Open the correct instrument (IG Cash 1€)

Create a fresh chart and pick the Cash (1€) CFD for your index:

- PA-DAX → *Germany 40 Cash (E)*
- PA-NAS → *US Tech 100 Cash (1€)*
- PA-WS → *Wall Street Cash (1€)*
- PA - GBP/USD → *GBP/USD mini*
- PA - GOLD → *SPOT GOLD (1€)*

3) Match the timeframe to the strategy name

- PA-XXX 30M → 30-minute chart
- PA-XXX 15M → 15-minute chart
- PA-XXX 10M → 10-minute chart
- PA-XXX 5M → 5-minute chart
- PA-XXX 3M → 3-minute chart

4) Import the .itf files in this order

Indicators → Import (on the chart):

1. PaKey.itf (license/key)
2. PA-XXX.itf (strategy)
3. PA-XXX – IND.itf (indicator)

5) Backtest mode → set Size

Backtesting & Automatic Trading → select PA-XXX → Modify.

- Use a dot as decimal: **0.2** (not **0,2**).
- Typical minimum sizes (examples): DAX 0.2, Nasdaq 0.2, Wall Street 0.2
(*Your IG region/account may differ — if IG rejects orders, increase size.*)

6) Arm automatic trading

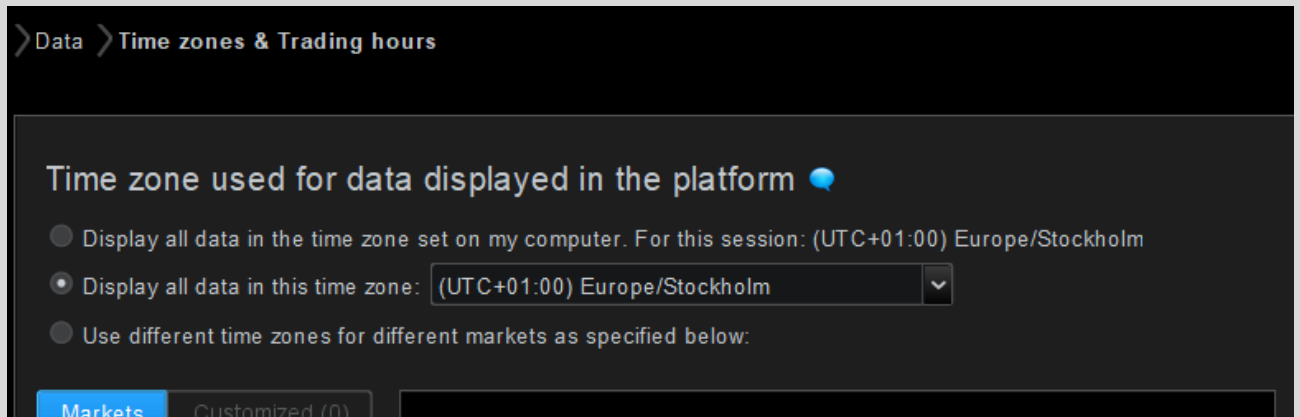

Open Automatic Trading → Prepare for automatic trading → accept prompts.

7) Start the algorithm

Select your PA-XXX in the list → Start.

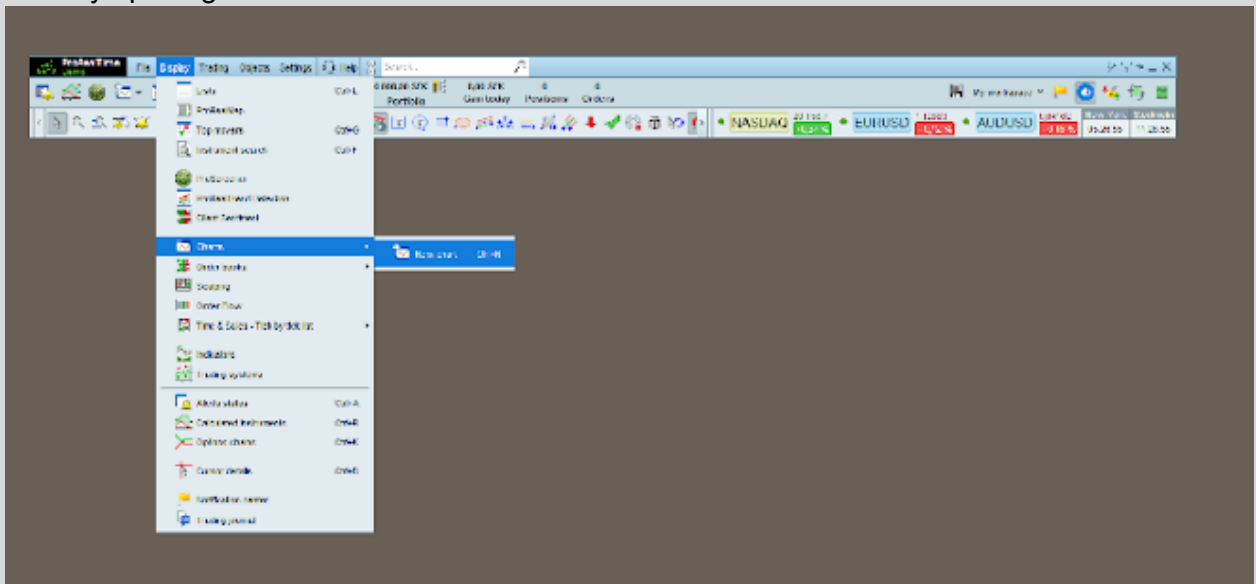

ProfitAlgos – Installation & Start Guide (ProRealTime)

Choose the correct Timezone. UTC+1

1. Open a New Chart

Start by opening a new chart in ProRealTime.

2. Select the Correct Instrument

First of all: Delete all files you might have from ProfitAlgos since before in ProRealtime.

Choose the correct indice (e.g. DAX, Nasdaq, Wall Street).

PA-DAX... = Germany 40 Cash (1€)

PA-NAS.. = UsTech 100 Cash (1€)

PA-WS... = Wall Street Cash (1€)

3. Select the Correct Timeframe

Then choose the correct timeframe (e.g. 15 min, 30 min).

PA-XXX 30M... = Timeframe 30 minutes.

PA-XXX 15M... = Timeframe 15 minutes.

PA-XXX 10M... = Timeframe 10 minutes.

PA-XXX 5M... = Timeframe 5 minutes.

PA-XXX 3M... = Timeframe 3 minutes.

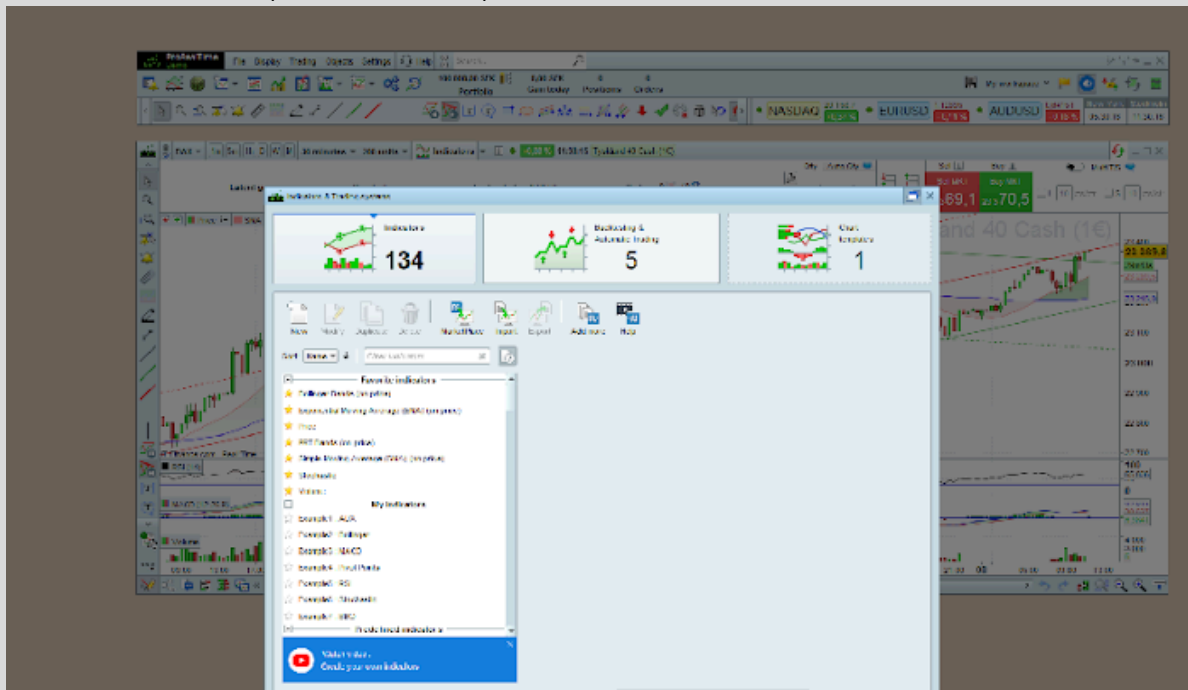

4. Import the Strategy Files

Click on Indicators in the chart.

Press Import and import the following files in order:

1. PaKey.itf
2. PA-XXX.itf (the strategy file)
3. PA-XXX – IND.itf (the indicator file)

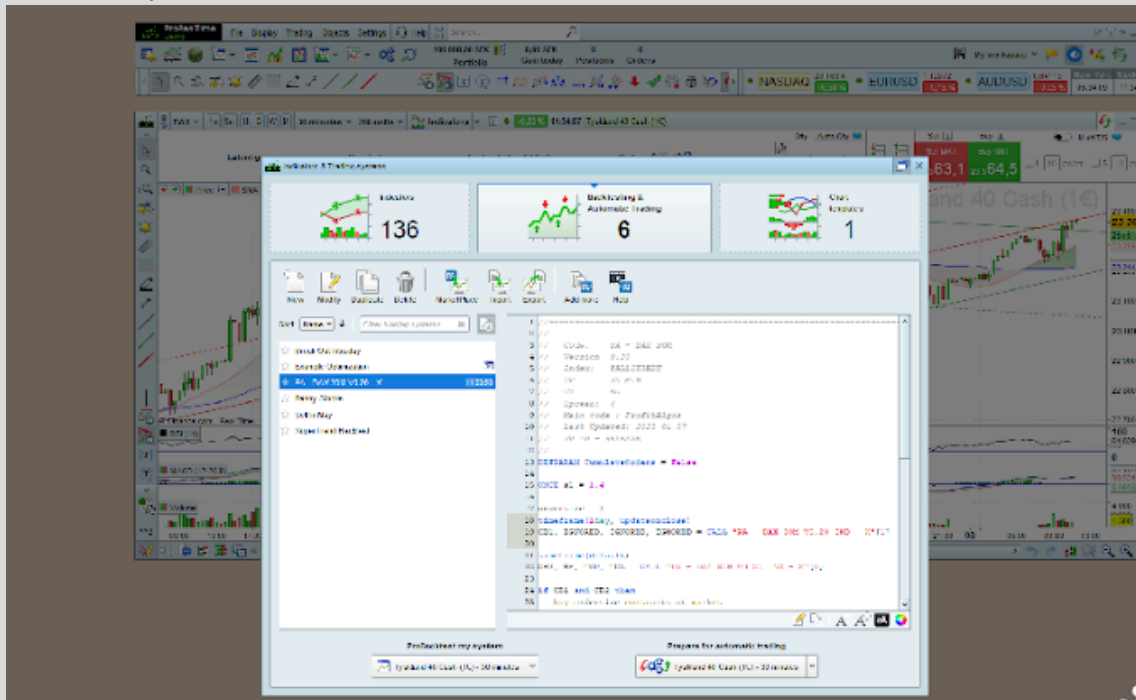

4. Activate Backtest Mode

Go to the Backtesting and Automatic Trading tab.

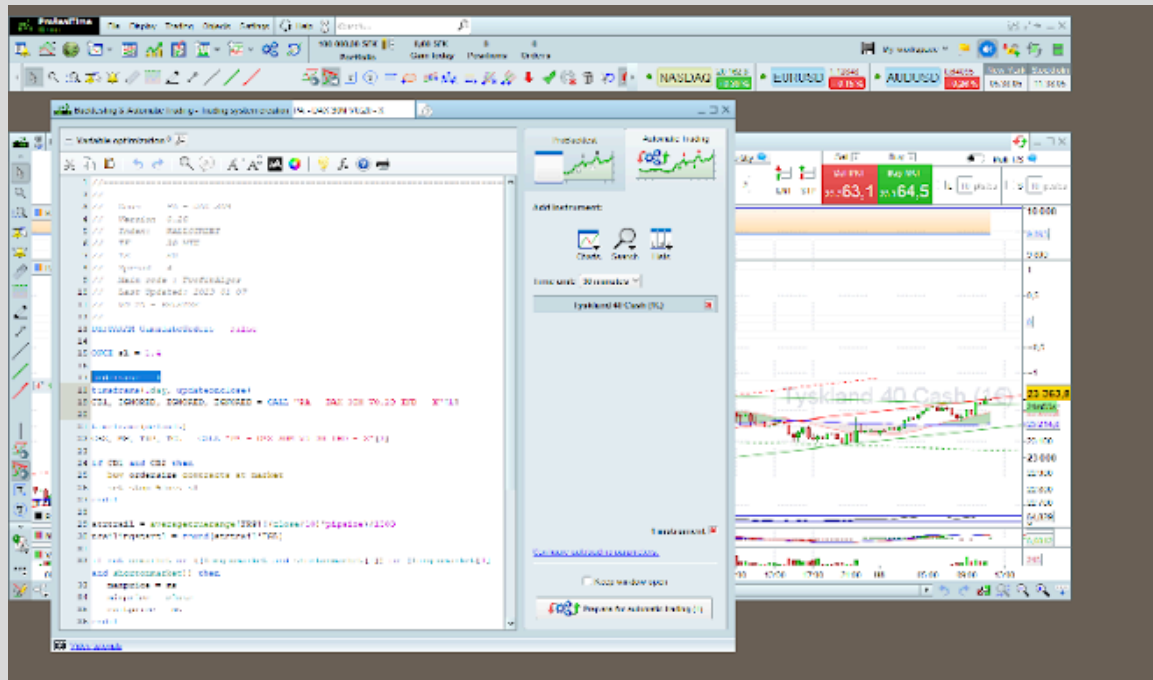

Choose the algo: PA-XXX

Click Modify

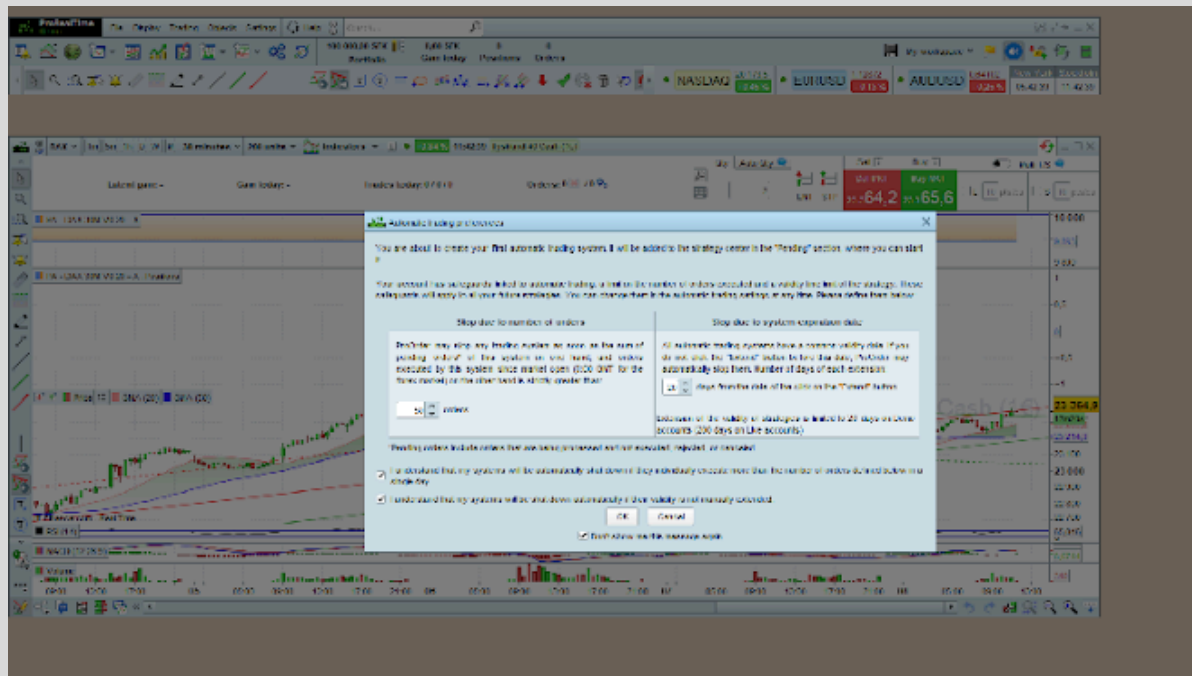

6. Enable Automatic Trading

Switch to the Automatic Trading tab.
Press Prepare for automatic trading
Accept and press OK

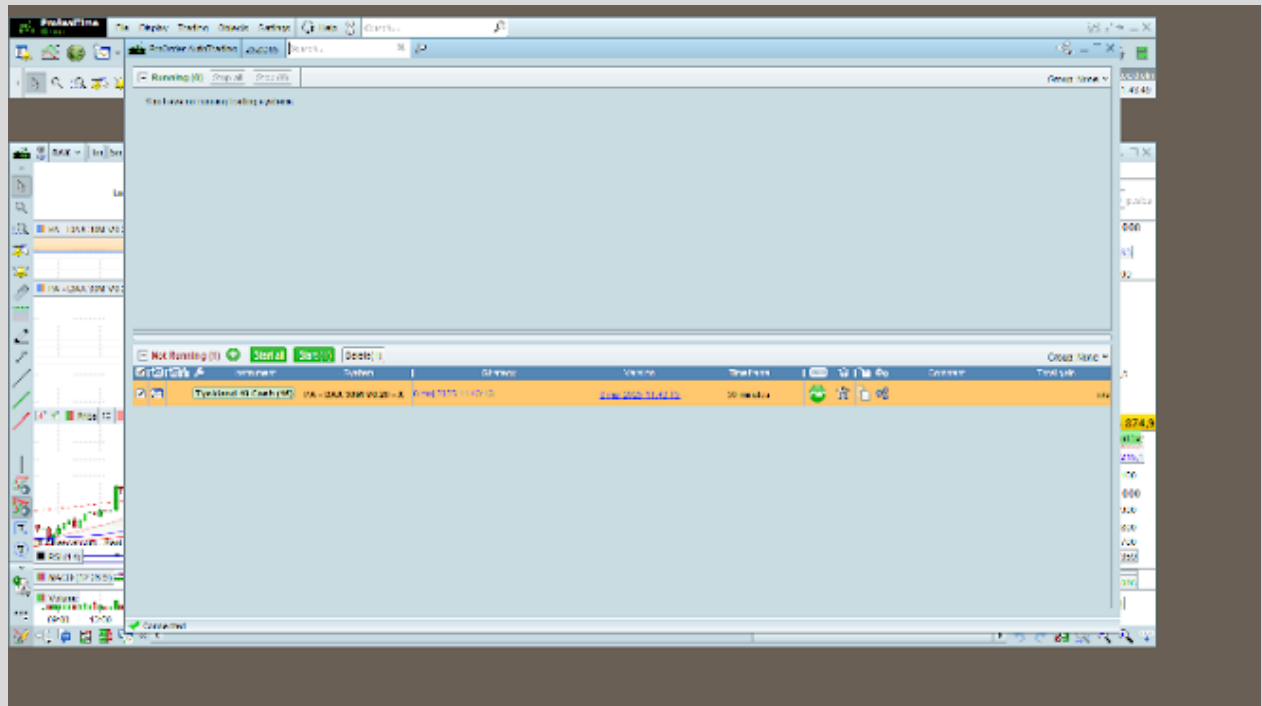

Accept and press OK

7. Start the Algo

Select your algo from the list.

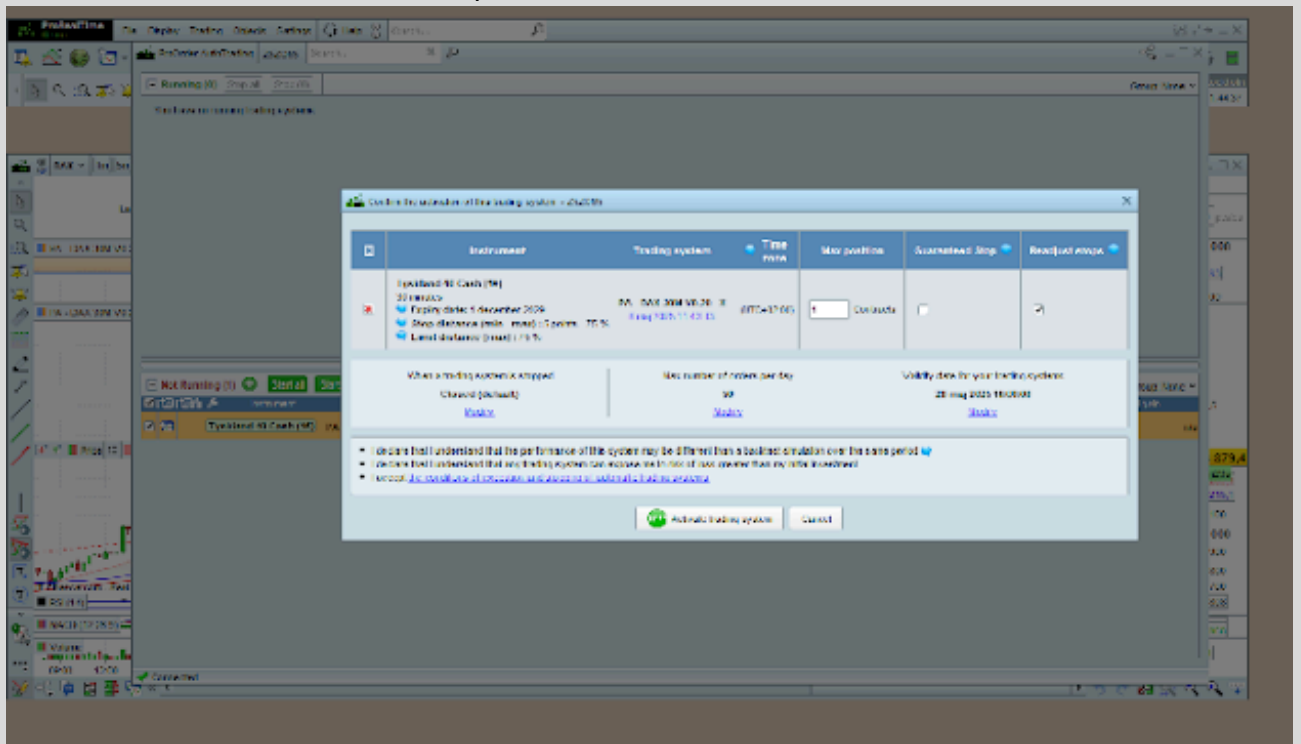

Press Start

8. Final Checklist (Before Launch)

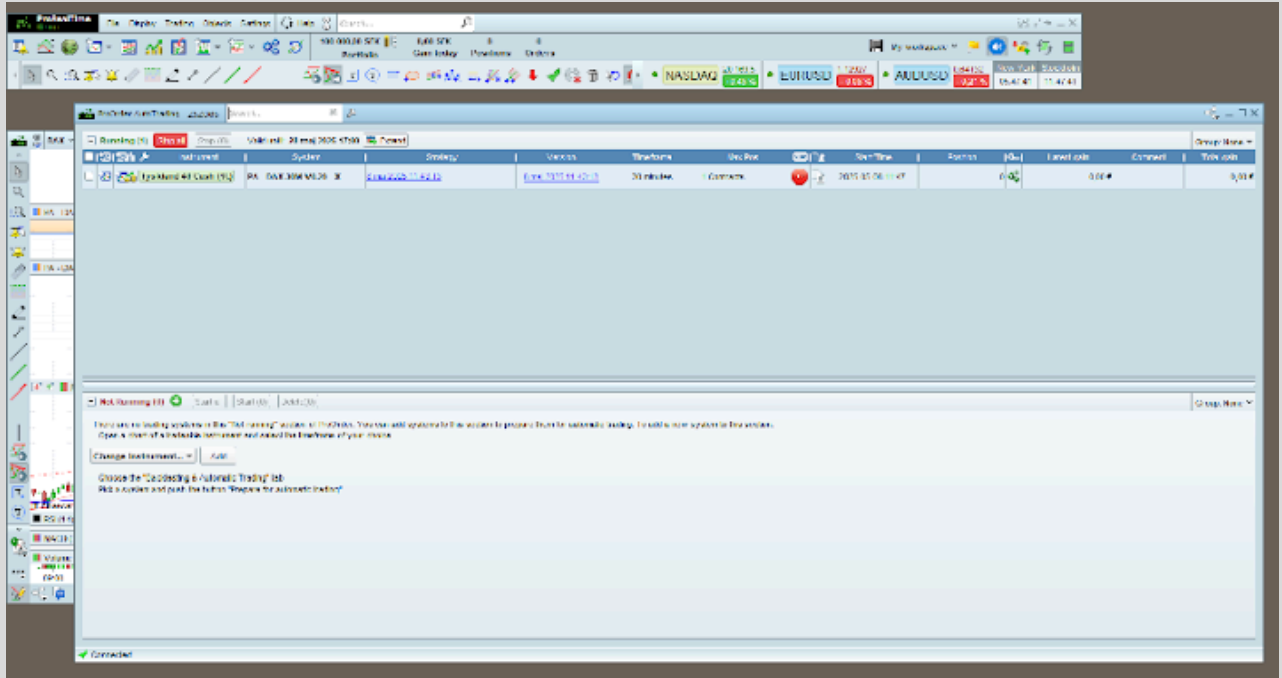

Make sure the following settings are correct:

- Readjust stops is enabled
- Correct instrument is selected
- Correct timeframe is applied
- Timezone is set to: UTC +02:00
- Max position:
 - If size in code is ≤ 1 : Max position = 1
 - If size in code is > 1 and ≤ 2 : Max position = 2

All Set!

Your algo is now live and trading automatically. You're up and running!
